

NMD 345/Class Notes
04/09/14
Caitlin Trafton

Due next week: take scripts from others and use in your own.

Ben: "Drop you like your Mother"

API: send something to get something back

Heather: Customize .js Option

Applications>illustrator>presets>scripts

Add .js file

To install new scripts you need to:

- » Download the binary file using "Save as". The file contents look like gobly-gook.
- » Quit Illustrator
- » Copy the file into the Illustrator application folder's "Presets" » "Scripts" subfolder
- » After restarting Illustrator, you can find the scripts in the menu "File" » "Scripts";
- » TIP: You can create subfolders in the scripts folder to organize your scripts

NOTE: You will need version CS3 or CS4 of Illustrator. If you have CS or CS2, get a [trial version of CS4](#) from Adobe. Also see posts about [version 3](#) and [version 4](#) of the Calendar script.
